International Electric Vehicles & Charging Facilities Exhibition

eMobility China - clean vehicles from clean energy

The development of electric vehicles is a milestone for the auto industry in the 21st century and plays an important role in alleviating the energy crisis and environmental problems.

With several ongoing demonstration projects throughout the country, China has emerged as a worldwide leader in developing electric vehicles. Annual production of electric vehicles is forecast to account for 20% (10 million) of total production by 2020. With favorable policies in place, large investments are now necessary to create the supporting charging infrastructure.

Why eMobility China?

As initiators of eMobility China, the electric power producers in China have jointly established the Electric Vehicle Charging Facilities Standardization Committee. With State Grid and China Southern Grid as pilots, an **electric vehicle charging system** based on **unified national technical standards** will be established in the coming years.

eMobility is a **crucial application of clean energy** and plays an important part in the energy strategy of the future in China.

Combined showcase of facilities for charging of electric vehicles, energy storage and smartgrid technologies.

Position your brand in China's huge and growing market, or find local partners for your growth strategy.

Share the resources and **take advantage to network across all renewable energy sectors** at the joint event Clean Energy Expo China, providing a perfect environment for your business.

Learn from industry leaders, policy and decision makers at our **cutting edge conference**.

Benefit from the **authoritative government representation** by the China Electricity Council, as well as **professional show management** by Koelnmesse, with an extensive international outreach through our family of global environmental events.

Product Profile

- Charging facilities, grid connection
- Energy storage, batteries
- Electric vehicles
- Services, financing

Voices from the industry

Mr. Lu Weijiang, Deputy Marketing Director of the State Grid Electric Power Research Institute

"We will definitely participate at Clean Energy Expo China again and bring our latest renewable energy generation as well as grid connection technology and equipment. There is interaction and exchange between industry peers. We feel very good here and hope to network with more people."

Mr. Li Ye, Director, Energy Saving and Science Equipment Department, National Energy Administration

"The 12th Five-Year-Plan has made a clear point to make drastic changes to the energy production and consumption patterns while reasonably controlling the overall energy consumption. We believe this is China's strategic directive for the local energy industry."

Mr. Liu Baohua, Director of Marketing, Regulatory Commission Department, State Electricity Regulatory Commission

"The world is facing a profound energy revolution... (and) clean energy has become a global power development hot topic... China's power industry is growing rapidly in the pursuit of structural optimization and it has achieved some success.

However, due to historical, technical, economic and other reasons, the proportion of clean energy compared to the overall amount is still limited. Therefore, the future technical and market development potential of clean energy is immense."
