"Modern grid technology is the key to the successful expansion of renewable energy in China"

Grids – The Backbone of China's Energy Future

China must achieve a reliable and stable grid that works for the renewable energy sources the country is going to depend on.

Upgrading, extending and connecting China's electricity grids is essential to meet the official emissions reduction and renewable energy targets. It is also essential for a more competitive market and cheaper electricity. Without new and better grids, China cannot exploit its enormous renewable energy resources and rapidly move towards a clean energy economy.

Why GridTec China?

Behind GridTec China is the China Electricity Council, umbrella organization of all power producers and GridTec providers in China. Its members have a **viable need in developing a modern grid for China**, in order to support the development of renewable energies in China, and securing China's energy future.

Grid is **the crucial factor connecting all clean energies** which are on showcase at Clean Energy Expo China. This provides the perfect environment for your business.

Grid Connection has been identified as a **major bottleneck** in the continuing expansion of renewable energy in China. **Large investments are necessary** to support the boom in wind, solar, and other clean energies.

Position your brand in China's huge and growing market, or find local partners for your growth strategy.

Learn from industry leaders, policy and decision makers at our **cutting edge conference**.

Benefit from the **authoritative government representation** by the China Electricity Council, as well as **professional show management** by Koelnmesse, with an extensive international outreach through our family of global environmental events.

Product Profile

- Grid Connection
- Transmission
- Storage
- Smartgrid
- Electric charging facilities
